Experience

Oct 2020 – Present **Principal Software Engineer**, *Doctolib GmbH*, Berlin (Germany).

- Support the feature teams that are working on the website for healthcare professionals: review of technical pre-project documents, pair programming, advise and help regarding technical debt and legacy code, "tech tasks" prioritization and reporting
- Cross-domain work: contribution to large-scale projects, refactoring, mentorship (internal program based on weekly 1-on-1 meetings) and trainings (mostly on front-end topics and Git)
- Risk management: support, mitigation and prevention of organizational threats and down incidents
- Interviewing engineering directors, managers and software engineers

Remarkable achievements:

- 2021: made English the default language of the monolith in place of French, enabling 150 international developers in 3 countries to develop and write tests faster
- 2019-2021: decided the end of the support of Internet Explorer 11 and led a company-wide program to help Doctolib's customers upgrade their outdated browsers, from small practices to large hospitals, allowing 1. the removal of tests on these browsers 2. simplifying our front-end build pipeline 3. decreasing the number of incidents related to old browsers close to zero
- 2018-2021: led a cross-team effort to refactor 600+ files written in RxJS to vanilla JavaScript or React hooks, hence removing the number one pain point that was reported by developers about the front-end stack at that time
- 2020: removed Rails Sprockets in favor of Webpack, simplifying our front-end build pipeline and allowing developers to write modern JavaScript everywhere in the codebase

Stack: Ruby on Rails, PostgreSQL, Resque, Redis, Elasticsearch, React. Our CI executes 30,000+ integration tests (Minitest + Capybara) and a few hundred model and unit tests (JavaScript and Ruby).

Additional relevant keywords: AWS, TeamCity, New Relic, Sentry, Jest, SCSS.
